

OUR HISTORY

The history of **TECNOSICUREZZA** began in Verona in 1983.

Founded by Franco Miller, an expert technical director from the world of safes, the company was initially the official distributor of the La Gard - Stuv - STB brands for Southern Europe. **TECNOSICUREZZA** immediately established itself as a reference for the most innovative products on the market.

Over the years, the company has expanded its know-how, investing in research and development and becoming one of the leaders in the design and marketing of locks, keyboards and software that manage and maintain the highest levels of security management.

OUR COMPANIES

TECNOSICUREZZA headquarters is located in Verona, with offices both in Spain (since 1987) and the United States (since 2017).

The expansion of the global presence also continues both through a vast network of authorized installers and distributors and through agreements with customers and partners with an international presence.

THE COMPANY

OUR MISSION

TECNOSICUREZZA is aimed at national and international customers and partners of primary importance such as credit institutions, large retail brands, manufacturers of safes, vaults and strong rooms, armoured vehicle transport companies and national postal services.

The company, with a department dedicated to research and development, has always invested in innovative solutions that meet the needs and wishes of the customer.

TECNOSICUREZZA is a competitive, safe and reliable partner not only for the range of products offered but also thanks to the support and assistance offered.

PRODUCTS

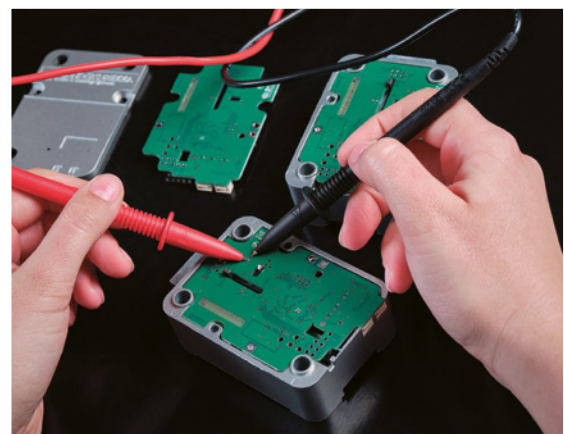

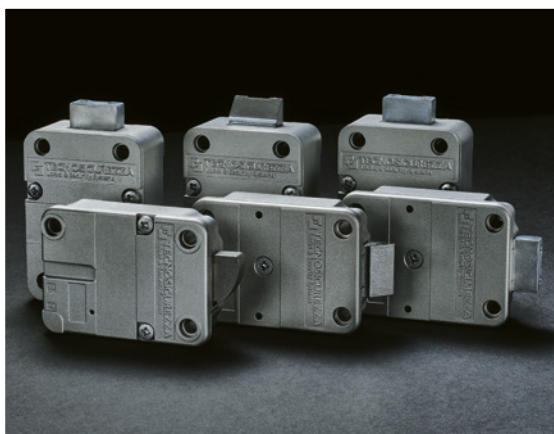

THE SEARCH FOR INNOVATION

Technological evolution has always been at the center of the company's strategies: at the end of the 90s, in agreement with La Gard, the LG Master project was developed, a cutting-edge system that immediately set itself as a market reference point.

The company progressively structured and created its own R&D department. The definitive separation from La Gard took place in 2007, taking advantage of the opportunity to develop a policy of total autonomy and the beginning of the marketing of TECNOSICUREZZA branded products.

Production and assembly of the products take place 100% in Italy and the TECNOSICUREZZA range today covers - both as keyboards and locks and as software - all the needs in the managing of processes related to the highest levels of security management.

The company also has modern laboratories where rigorous quality tests are constantly conducted.

The line of locking systems starts with the **Pulse** product, with entry-level functions, up to the top of the range represented by the digital **TechMaster**, a multi-user system equipped with a display, the ability to manage different locks through a single keypad and numerous other functions.

With **TechMaster** it is also possible to implement both remote control - through the proprietary **CorenWeb** software - and the generation of OTC codes (One Time Code) through the proprietary **DyamaWeb** software.

Solutions with key and/or knob locks, electromechanical locks and **Dallas key** opening systems are also available.

THE QUALITY CERTIFICATIONS

Operating in the world of safety means creating and certifying your products following the most rigorous quality standards, both in the production phase and in the after-sales service phase.

TECNOSICUREZZA has been **ISO: 9001** certified since **1998** and, depending on the products, has acquired numerous **VDS**, **UL** and **A2P** certifications over the years. Locks and keyboards are designed and built in the Verona headquarters by highly specialized personnel and are subjected to numerous checks to test their quality and resistance.

TECNOSICUREZZA has both a branched network of assistance centres in Italy and in the world, and internal staff specifically dedicated to service. Training courses and updates are also carried out on an ongoing basis for partners all over the world.
